SECTION 2. HAZARDS IDENTIFICATION (CONTINUED)

2.4 CHEMICAL HAZARDS: Sodium hydroxide reacts explosively, or forms explosive compounds, with: warm ammoniacal silver nitrate, 4-chloro-2-methylphenol, 2-nitroanisol and zinc, N,N'-bis(trinitroethyl)urea, cyanogen azide, 3-methyl-2-pentene-4-yn-1-ol, nitrobenzene, sodium tetrahydroborate, 1,1,1-trichloroethanol and zirconium. Reaction with oxime and diborane is very exothermic, and a mild explosion occurred on one occasion. Eight serious explosions have occurred (1949 - 1976) during commercial preparation of 2,4,5-trichlorophenol by alkali partial hydrolysis of 1,2,4,5-tetrachloroacetylene. Vigorous or violent reactions have been reported with: bromine, chloroform and methanol, trichloronitromethane. and with limited amounts of water, violent eruption and even ignition of adjacent combustibles have been reported. Failure to agitate a large scaloe mixture of 4-methyl-2-nitrophenol, sodium carbonate and methanol also resulted in eruption. Accidental mixing with hot crude 1,4-benzenediol led to extensive exothermic decomposition, as do mixtures with ethylene glycol or diethylene glycol (heated in DSC capsules). Ignition has occurred with: zinc, rags soaked with sodium hydroxide and cinnamaldehyde overheated and ignited when they came into contact in a waste bin. An aluminum ladder used to gain access to a tank of alkaline arsenical mixture (arsenic trioxide and sodium arsenate) was attacked by the alkali and the hydrogen produced generated arsine and resulted in the poisoning of 3 workers.

SEE SECTIONS 8, 11 & 12 FOR TOXICOLOGICAL INFORMATION.

All pertinent hazard information has been provided in this document, per the requirements of the Federal Occupational Safety and Health Administration Standard (29 CFR 1910.1200), U.S. State equivalents, and Canadian Hazardous Materials Identification System Standard (CPR 4).

SECTION 4. FIRST AID MEASURES

4.1 GENERAL ADVICE:

First Aid responders should pay attention to self-protection and use the recommended protective clothing (chemical resistant gloves, splash protection). If potential for exposure exists, refer to Section 8 for specific personal protective equipment.

4.2 EYE CONTACT:

If this product enters the eyes, open eyes while under gently running water. Use sufficient force to open eyelids. "Roll" eyes to expose more surface. Minimum flushing is for 15 minutes. seek immediate medical attention.

4.3 SKIN CONTACT:

If the product contaminates the skin, immediately begin decontamination with running water. Minimum flushing is for 15 minutes. Remove contaminated clothing, taking care not to contaminate eyes. SECTION 4. FIRST AID MEASURES (CONTINUED)

4.4 INHALATION:

After high vapor exposure, remove to fresh air. If breathing is difficult, give oxygen. If breathing has stopped, trained personnel should immediately begin artificial respiration. If the heart has stopped, trained personnel should immediately begin cardiopulmonary resuscitation (CPR). Seek immediate medical attention.

4.5 SWALLOWING:

If swallowed, CALL PHYSICIAN OR POISON CONTROL CENTER FOR MOST CURRENT INFORMATION. If professional advice is not available, give two glasses of water to drink. DO NOT INDUCE VOMITING. Never induce vomiting or give liquids to someone who is unconscious, having convulsions, or unable to swallow. Seek immediate medical attention.

4.6 NOTES TO PHYSICIAN:

There is no specific antidote. Treatment of overexposure should be directed at the control of symptoms and the clinical condition of the patient. Any material aspirated during vomiting may cause lung injury. Therefore, emesis should not be induced mechanically or pharmacologically. If it is considered necessary to evacuate the stomach contents, this should be done by means least likely to cause aspiration (such as: Gastric lavage after endotracheal intubation).

Victims of chemical exposure must be taken for medical attention. Rescuers should be taken for medical attention, if necessary. Take a copy of label and SDS to physician or health professional with victim.

SECTION 5. FIRE FIGHTING MEASURES

5.1 FIRE & EXPLOSION PREVENTIVE MEASURES

Isolate from acids, oxidizers, extreme heat and open flame.

5.2 EXTINGUISHING MEDIA

In case of fire in surroundings, all extinguishing agents allowed.

5.3 SPECIAL FIRE FIGHTING PROCEDURES

Water spray may be ineffective on fire but can protect fire-fighters & cool closed containers. Use fog nozzles if water is used. Do not enter confined fire-space without full bunker gear. (Helmet with face shield, bunker coats, gloves & rubber boots).

5.4 UNUSUAL EXPLOSION AND FIRE PROCEDURES

Closed containers may burst if exposed to extreme heat. Applying to hot surfaces requires special precautions.

SECTION 6. ACCIDENTAL RELEASE MEASURES

6.1 PERSONAL PROTECTIVE MEASURES:

Keep unprotected personnel away.
Use complete chemical protective suit with self-contained breathing apparatus.

6.2 ENVIRONMENTAL PRECAUTIONS:

Keep from entering storm sewers and ditches which lead to waterways.

6.3 CONTAINMENT AND CLEAN-UP MEASURES:

Stop spill at source. Dike and contain. Sweep spilled material into dry, sealable containers. Wash away remainder with plenty of water. This material is alkaline and may raise the pH of surface waters with low buffering capacity. Releases should be reported, if required, to appropriate agencies.
